CLINICAL NOTES

Rheumatoid Factor (RF) level is within normal reference range (<15 IU/mL). RF is an autoantibody associated with rheumatoid arthritis and other autoimmune conditions. Current levels are within normal limits, indicating no significant elevation. Note: RF can be elevated in rheumatoid arthritis, Sjögren syndrome, and other autoimmune disorders, but it can also be negative in some patients with rheumatoid arthritis (seronegative RA). Clinical correlation with symptoms and other diagnostic tests is recommended.
